## To the Learner

Welcome to *Fundamentals of Mathematics 3*.

You have the skills you need to be a strong student in this class. Your instructor knows this because you have passed the Fundamentals of Mathematics 2 class, or you have been assessed into this level.

Adult math learners have many skills. They have a lot of life experience. They also use math in their everyday lives. This means that adult math learners may already know some of what is being taught in this book. Use what you already know with confidence!

## How to Use This Book

This textbook has:

A **Table of Contents** listing the units, the major topics, and the subtopics.

Many **Exercises** to practice what you learned. You do not have to do every single question!

- Do as many questions as you feel are necessary for you to be confident in your skill. It is best to do all the word problems.
- If you leave out some questions, try doing every second or every third question. Always do some questions from the end of each exercise because the questions usually get harder at the end. You might use the skipped questions for review before a test.
- If you are working on a difficult skill or concept, do half the exercise one day and finish the exercise the next day. That is a much better way to learn.

**Self-tests** at the end of most topics have an “Aim” at the top. If you do not meet the aim, talk to your instructor, find what is causing the trouble, and do some more review before you go on.

**Mark     /18     Aim   15/18**

A **Review and Extra Practice** section is at the end of each unit. If there is an area of the unit that you need extra practice in, you can use this. Or, if you want, you can use the section for more review.

A **Practice Test** is available for each unit. You may:

- Write the practice test after you have studied the unit as a practice for the end-of-chapter test, OR
- You might want to write it before you start the unit to find what you already know and which areas you need to work on.

**Unit Tests** are written after each unit. Again, you must reach the Aim before you begin the next unit. If you do not reach the aim, the instructor will assist you in finding and practising the difficult areas. When you are ready, you can write a Test B to show that you have mastered the skills.

A **Final Test** is to be written when you have finished the book. This final test will assess your skills from the whole book. You have mastered the skills in each unit and then kept using many of them throughout the course. The test reviews all those skills.

# How to Deal with Math Anxiety

## Emotions and Learning

Our feelings have a big effect on how we learn. When we're calm and relaxed, we learn better. But when we're scared or stressed, it's harder for us to learn.

Many people are afraid of math. "Math anxiety" is the fear of math. People who suffer from math anxiety may get headaches, sick stomachs, cold hands, or they may just sweat a lot or just feel scared. Math anxiety can happen for a few different reasons:

- Feeling anxious when writing tests
- Negative experiences in a past math class
- Social pressures and expectations to not like math or not do well in math
- The want to get everything right
- Negative self-messages ("I don't know how to do it," or "I hate math")

Math anxiety is a learned habit. If it is learned, it can be unlearned. Everyone can learn math. There are some people who are better at math than others, but even these people had to learn to be good at math.

## Do You Suffer from Math Anxiety?

Read the list below and put a check mark beside the ones you feel when thinking about or doing math.

- Are your palms moist?
- Is your stomach fluttering?
- Do you feel like you can't think clearly?

- Do you feel like you would rather do anything else than learn math?
- Are you breathing faster than normal?
- Is your heart pounding?
- Do you feel cold?
- Do you feel sweaty?

If you answered yes to two or more of these items, you may have math anxiety.

## Strategies for Managing Math Anxiety

The key to learning is to be the “boss” of your anxiety. Here are some strategies that may help deal with your anxiety.

### Use Breathing Exercises

One way to be the “boss” is to relax. Try this breathing exercise.

Start by breathing slowly to the count of four. It may help to close your eyes and count. Now hold your breath for four counts and then let your breath out slowly to the count of four.

The counting is silent and should follow this pattern: “Breath in, two, three, four. Hold, two, three, four. Breath out, two, three, four. Wait, two, three, four.”

With practice, the number of counts can be increased. This is an easy and good way to relax.

Now, try this exercise quietly and repeat it five times slowly.

Each time you feel anxious about learning, use the breathing exercise to help calm yourself.

## Think Positive Math Messages

Another way to be the “boss” is to give yourself positive math messages. Read and think about the positive math messages listed below.

I like math.  
I am good at math.  
I understand math.  
I can relax when I am studying math.  
I am capable of learning math.  
My math improves every day.  
I am relaxed, calm and confident when I study math.  
I understand math when I give myself a chance.  
Math is creative.

Pick three statements that you like and say them to yourself as much as you can in each day. You can also write the statements out on paper and post them around your house so that you read them throughout the day.

## Know Your Textbook

Look at the Table of Contents in the front of your textbook. It tells you what you will be learning. You may see some things that you already know, some things that you may have forgotten, and some things that are new to you.

Flip the pages. You can see that the textbook is split into units. Each unit is something to learn.

Each unit has exercises to do. Notice the answers at the end of each exercise. You can check your answers as soon as you are done. You can also check your answer before moving on if are not sure if you are doing a question right.

At the end of each unit is a self-test. It is a chance for you to see how well you have learned the skills in the unit. If you do well, you can move on. If you don't do well, you can go back and practice those skills.

Knowing your textbook gives you a good skill. If you get frustrated, you can use the Table of Contents to go back and find some help.

## Understand Test-Taking Anxiety

Here are four reasons people may be anxious when writing tests, along with strategies for coping:

### 1. Not feeling prepared for the test

Many students feel anxiety about taking math tests because they do not feel prepared for the test. To feel prepared, a student needs to have studied the work and know that they can do the problems they will be given.

Getting ready for a test starts on the first day of class. Everything you do in class and at home is part of that getting ready.

- **Always do as many exercises as you need to help you understand.** Once you understand, do ten more questions, then you will know for sure that you really understand.
- **Always correct your exercises.** It is good to know that you are understanding and getting the questions right. It is also good to know if you are not understanding and need some help.
- **Always do the self-tests.** The self-tests can show things that you are not sure of.
- **Always do the review.** Review is part of this book. It is a chance to go over all the things you have learned in a unit before moving on. It prepares you for what will be on the test.
- **Always do a practice test.** A practice test gives you a chance to see how many questions and what kind of questions are on the test.

## 2. Not sure how to write the test in the best way

Here are some strategies students should know about how to write a test to do as well as possible:

### *Before the Test*

- **Arrive early.** Get out all the supplies you need to do the test (pencils, ruler, calculator, watch, etc.).
- **Be comfortable, but alert.** Choose a good spot in the room, and make sure you have enough space to work. Maintain a comfortable posture in your seat, but don't "slouch."
- **Stay relaxed and confident.** Keep a good attitude. If you find yourself anxious, take several slow, deep breaths to relax.

### *During the test*

- **Look over the test.** Take a look at the whole test before starting. This takes very little time. Use a highlighter to highlight the questions that you know you can do easily, note key terms, mark the test with comments that come to mind. As you work, put a star beside any questions that you would like to go over again when you finish the test.
- **Relax.** Before starting the test, imagine yourself somewhere where you are calm and confident. Go there in your mind. Focus on how good you feel and how in control you are. If you become anxious during the test, in your mind go to the calming place. Focus on how calm you feel. Then go back to your test.
- **Read the directions carefully.** This may be obvious, but it will help you avoid careless errors.
- **Answer questions in a strategic order.** Answer the easy questions first. This will help to build confidence and score points. It may also help you make connections with more difficult questions. Then answer the difficult questions. Work on these harder questions with all the energy of the easier ones.
- **Review your answers.** Resist the urge to hand in your test as soon as you are

done writing. Spend as much time as you can going over your test to see if you answered all the questions and check for errors.

### **3. Feeling too much mental pressure**

There are many reasons why a student may feel mental pressure when writing a test. Listed below are a few main reasons:

- Negative beliefs about one's math abilities
- Low self-esteem when it comes to math
- Too high expectations of success
- Fear that failure or low grades will affect the future
- Feelings of pressure of not wanting to let down family members

When students feel this kind of pressure, it is very hard to feel calm and relaxed about a test. The key to success in a math test is to keep the anxiety at a manageable level. You can do this in two ways:

**Change negative self-talk.** Any time a negative thought creeps into your head, it will make it harder to stay positive and relaxed about your test. If you have a negative thought like “I can't do it”, try to replace it with a positive thought like “I can do this”.

**Use relaxing and calming techniques.** Use the calming breathing mentioned earlier in this section. This will help you keep calm. Also, do not study in the last half hour before the test. You will be calmer by spending time relaxing and breathing deeply in that last half hour.

### **4. Poor health habits before writing a test**

When your body and mind are healthy, you will have a better chance of doing well on a test. Eat well, drink plenty of water and get daily exercise. The better you feel, the better you will do.

# Unit 1: Multiplication

## Topic A: Multiplying Larger Numbers

It is usually easier to multiply larger numbers if they are written underneath each other. The bottom number is called the multiplier.

**To find the product of a one digit multiplier,** use as many of these steps as you need to complete each multiplication question:

- **Step 1:** Multiply the ones digit in the large number by the one-digit multiplier.
- **Step 2:** Multiply the tens digit in the large number by the multiplier.
- **Step 3:** Multiply the hundreds digit in the large number by the multiplier.
- **Step 4:** Multiply the thousands digit in the large number by the multiplier.

### Example A

$$62 \times 4 =$$

**Step 1:**  $4 \times 2$  ones = 8

$$\begin{array}{r} 62 \\ \times 4 \\ \hline 8 \end{array}$$

**Step 2:**  $4 \times 6$  tens = 24 tens = 2 hundreds and 4 tens

$$\begin{array}{r} 62 \\ \times 4 \\ \hline 248 \end{array}$$

The product of  $62 \times 4$  is 248.

## Renaming and Carrying

In the times tables, the products are often two digit numbers. You must rename and carry. The amount you carry is added onto the product of the next column.

### Example D

$$\begin{array}{r} 68 \\ \times 7 \\ \hline \end{array}$$

**Step 1:** Multiply the ones by the multiplier.

$$7 \times 8 \text{ ones} = 56 \text{ ones} = 5 \text{ tens} + 6 \text{ ones}$$

Write the 6 ones in the product.

Carry the 5 tens to the tens column and make a note of it for yourself. You might write it above the tens column.

$$\begin{array}{r} 5 \\ 68 \\ \times 7 \\ \hline 6 \end{array}$$

**Step 2:** Multiply the tens by the multiplier.

$$7 \times 6 \text{ tens} = 42 \text{ tens}$$

Now add on the 5 tens that you carried.

$$42 \text{ tens} + 5 \text{ tens} = 47 \text{ tens} = 4 \text{ hundreds and } 7 \text{ tens}$$

$$\begin{array}{r} 5 \\ 68 \\ \times 7 \\ \hline 476 \end{array}$$

## Exercise 3

$$4 \times 224 =$$

$$\begin{array}{r} 224 \\ \times 4 \\ \hline \end{array}$$

**Step 1:**  $4 \times 4$  ones = 16 ones = 1 ten and 6 ones

Write the 6 ones in the product and carry the one ten.

$$\begin{array}{r} 1 \\ 224 \\ \times 4 \\ \hline 6 \end{array}$$

**Step 2:**  $4 \times 2$  tens = 8 tens

8 tens + 1 ten we carried = 9 tens

$$\begin{array}{r} 1 \\ 224 \\ \times 4 \\ \hline 96 \end{array}$$

**Step 3:**  $4 \times 2$  hundreds = 8 hundreds

## Example F

$$4 \times 456 =$$

$$\begin{array}{r} 456 \\ \times \quad 5 \\ \hline \end{array}$$

**Step 1:**  $5 \times 6$  ones = 30 ones = 3 ten and 0 ones

The 0 must be written to hold the ones place. Carry the 3 tens.

$$\begin{array}{r} \phantom{3} \\ 456 \\ \times \quad 5 \\ \hline 0 \end{array}$$

**Step 2:**  $5 \times 5$  tens = 25 tens

25 tens + 3 tens = 28 tens = 2 hundreds and 8 tens

Write the 8 tens in the product. Carry the 2 hundreds.

$$\begin{array}{r} \phantom{2} \phantom{3} \\ 456 \\ \times \quad 5 \\ \hline 80 \end{array}$$

**Step 3:**  $5 \times 4$  hundreds = 20 hundreds + 2 hundreds = 22 hundreds = 2 thousands and 2 hundreds

## Topic B: Two- and Three-Digit Multipliers

When the multiplier is more than one digit, you use the same process and get partial products. You repeat the steps until you have multiplied by every digit, then add the partial products together.

### Multiplying by Two-Digit Multipliers

#### Example A

$$24 \times 23 =$$

**Part 1:** Multiply by the ones digit in the multiplier.

Multiply 3 ones by 24 using the method you already know. The first partial product is 72.

$$\begin{array}{r} 1 \\ 24 \\ \times 23 \\ \hline 72 \end{array}$$

**Part 2:** Multiply by the tens digit in the multiplier. First, put a 0 to hold the ones place in your partial product. We are multiplying by a ten, so we hold the ones place.

**Step 1:** Multiply 2 tens  $\times$  4 ones = 8 tens Write the 8 tens under the tens in your first partial product. It is very important to keep the columns straight – ones under one, tens under tens.

**Step 2:** Multiply 2 tens  $\times$  2 tens = 4 hundreds Write the 4 hundreds in your partial product. The second partial product is 480.

$$\begin{array}{r} 1 \\ 24 \\ \times 23 \\ \hline 72 \\ 480 \end{array}$$

**Part 3:** Add the partial products together, being sure to add ones to ones, tens to tens, hundreds to hundreds. The sum is the final product.

Draw a line under the partial products. Add. Check your addition.

$$\begin{array}{r}
 1 \\
 24 \\
 \times 23 \\
 \hline
 72 \\
 + 480 \\
 \hline
 552
 \end{array}$$

### Example B

$$36 \times 425 =$$

**Part 1:** Multiply by the ones digit in the multiplier.  $6 \times 425 = 2\,550$

$$\begin{array}{r}
 1\ 3 \\
 425 \\
 \times 36 \\
 \hline
 2550
 \end{array}$$

**Part 2:** Multiply by the tens digit in the multiplier. First put a 0 to hold the ones place in the second partial product.

- **Step 1:**  $3\text{ tens} \times 5\text{ tens} = 15\text{ tens} = 1\text{ hundred and }5\text{ tens}$   
Write the 5 tens in the second partial product and carry the 1 hundred. Now you can see why it is best to cross out the numbers you carry as soon as you have added them to the product.
- **Step 2:**  $3\text{ tens} \times 2\text{ tens} = 6\text{ hundreds}$   
 $6\text{ hundreds} + 1\text{ hundred (carried)} = 7\text{ hundreds}$ . There is nothing to carry.
- **Step 3:**  $3\text{ tens} \times 4\text{ hundreds} = 12\text{ thousands}$

$$\begin{array}{r}
 1 \\
 13 \\
 425 \\
 \times \quad 36 \\
 \hline
 2550 \\
 12750
 \end{array}$$

**Part 3:** Add the partial products together.

$$\begin{array}{r}
 1 \\
 13 \\
 425 \\
 \times \quad 36 \\
 \hline
 2550 \\
 + 12750 \\
 \hline
 15300
 \end{array}$$

Tip: Keeping the columns straight with ones under ones, tens under tens, hundreds under hundreds is very important. Working on large-squared graphing paper using one digit per square is often helpful.

tens  $\times$  tens = hundreds  
tens  $\times$  hundreds = thousands

## Exercise 1

When the multiplier has a zero in the ones place, use this shortcut.

**Example C**

$$\begin{array}{r} 48 \\ \times 80 \\ \hline 3840 \end{array}$$

**Step 1:** 0 ones  $\times$  48 = 0. Place one zero in the product and that will hold the ones place.

## Multiplying by Three-Digit Multipliers

To multiply by three digit multipliers, use the same method with one more part.

### Example E

$$417 \times 368 =$$

$$\begin{array}{r}
 \phantom{\times} 417 \\
 \times \phantom{0} 368 \\

 \end{array}$$

**Part 1:** Multiply by the 8 ones.

**Part 2:** Multiply the 6 tens; hold the ones place with 0.

**Part 3:** Multiply by the 3 hundreds. Put 00 to hold the ones and tens places in the third partial product.

- **Step 1:** 3 hundreds  $\times$  7 ones = 21 hundreds = 2 thousands and 1 hundred. Write the 1 hundred and carry the 2 thousands.
- **Step 2:** 3 hundreds  $\times$  1 ten = 3 thousands. 3 thousands + 2 thousands (carried) = 5 thousands.
- **Step 3:** 3 hundreds  $\times$  4 hundreds = 12 ten thousands.

**Part 4:** Add the partial products.

When multiplying by 10, 100, 1 000, 10 000, etc., place as many zeros to the right of the number as there are zeros in the 10, 100, 1 000, etc.

- To multiply by 10 put one zero after the number.
- To multiply by 100 put two zeros after the number.
- To multiply by 1 000 put three zeros after the number.

## Topic C: Estimating Products

Before you practice estimating products, look at the easy multiplication that can be done when the factors end in zeros.

You already know how to quickly multiply by 10, 100, 1 000, etc...

You can find the products in questions like these using regular multiplication:

**But here is a shortcut:**

1. Count all the zeros at the end of the numbers in both factors.
2. Write down that many zeros at the end of the product.
3. Multiply the other digits in the usual way and put them before the zeros.

### Example A

$$30 \times 500 =$$

- How many zeros at the end of the factors? **3**
- Write them down. **000**
- Multiply the other digits and put them before the zeros.  **$3 \times 5 = 15$**

$$30 \times 500 = 15\,000$$

## Example B

$$400 \times 3\,000 =$$

- How many zeros at the end of the factors? 5
- Write them down: **00 000**
- Multiply the other digits and put them before the zeros.  $4 \times 3 = 12$

$$400 \times 3\,000 = 1\,200\,000$$

## Exercise 1

## Topic D: Multiplication Problems

Multiplication problems usually give information for one unit and ask information for many units. For example, you may be given an average distance for one hour and asked for a distance for six hours. You may be given the price for one item and asked the price for 96 items.

Remember that multiplication is fast addition of equal amounts. Key words for addition may also point to multiplication.

### Key words that point to multiplication:

- altogether
- er
- combine
- d
- in all
- total
- the average is
- product
- how many?
- how much?
- each

### Exercise 1

Do these problems by following the five problem-solving steps. Remember to circle the information and underline what is being asked. Be sure to write down your estimation before you find the actual solution. Check your work using the answer key at the end of the exercise.

- a. Maria spent \$151 a month to ride to work. How much did it cost her to ride to work for the whole year? (1 year = 12 months)

- b. Fred travels 121 km a day on his delivery route. How far does he travel in 5 working days?
- c. Manuel buys 340 L of gas a month. In 6 months, how many litres of gas does Manuel buy?
- d. An apartment building has 16 apartments, each rented for \$870 a month. What is the total monthly rental income from this building?

- e. A farmer sells potatoes at \$53 per 50 kg sack. How much will he get for 75 sacks?
- f. Bob is paid \$12 per hour. If he worked 39 hours last week and 24 hours this week, how much did he earn for the two weeks? (two operations)
- g. It costs \$35 260 per working day to run the factory. How much does it cost to run this factory for a month of 23 working days?

- h. The train has an average speed of 75 km an hour. How far does this train travel in 14 hours?
- i. Lee's sports car averages 18 km per litre. How far can she drive on 12 L of gasoline?
- j. Frank bought a used car and paid for it over 15 months. He made 15 monthly payments of \$325 each. How much did he pay?

### Answers to Exercise 1

a. \$1 812

b. 605 km

c. 2 040 L

d. \$13 920

e. \$3 975

f. 63 hours, \$756

g. \$810 980

h. 1 050 km

j. \$4 875

## Topic D: Self-Test

**Mark /8 Aim 6/8**

Solve these problems. Show all your work. Give yourself one mark for the correct method and one mark for the correct answer.

a. A freight train has 70 cars. Each car can hold 22 680 kilograms of cargo. How much cargo can the train hold in all?

b. The highway distance between Fernie and Edmonton is 621 kilometres. How many kilometres will a bus travel in 68 trips from Fernie to Edmonton?

c. A tanker truck made 275 trips in one year. The truck hauled 23,800 litres each time. How many litres did the truck haul during the year?

d. The college cafeteria hopes to serve 425 people each day. Estimate how many meals will be served if the cafeteria is open 175 days.

### **Answers to Topic D Self-Test**

- a. 1 587 600 kilograms
- b. 42 228 kilometres
- c. 6 545 000 litres
- d.  $400 \times 200 = 80\,000$  meals

CONGRATULATIONS!!

Now you have finished Unit 1.

TEST TIME!

Ask your instructor for the practice test for this unit.

Once you've done the practice test, you need to do the unit 1 test. Again, ask your instructor for this.

Good luck!

# Unit 2: Division

## Topic A: Introduction and Division Facts

Division is an interesting operation. Both these signs tell you to divide:

$$8 \div 4 \quad 4 \overline{)8}$$

Division is the opposite of multiplication.

Multiplication takes equal-sized groups and puts the groups together to find the total.

$$3 \times 4 = 12$$

Division takes the total and separates that amount into equal groups. You can find the number of equal groups or the size of each group.

$$12 \div 4 = 3$$

$$4 \times 3 = 12$$

$$12 \div 3 = 4$$

$$\begin{array}{r} 4 \\ 3 \overline{)12} \end{array}$$

$$3 \times 4 = 12$$

$$12 \div 4 = 3$$

$$\begin{array}{r} 3 \\ 4 \overline{)12} \end{array}$$

**Learn this vocabulary for division:**

- Dividend – The number or quantity to be divided; the amount altogether.
- Divisor – The number we divide by. The divisor tells us the number of groups or the quantity in each group that the dividend is to be separated into.
- Quotient – (“kw ō shent”) The answer to a division question.

$$\begin{array}{r} \text{quotient} \\ \text{divisor} \overline{) \text{dividend}} \end{array} \quad \text{dividend} \div \text{divisor} = \text{quotient}$$

If you have learned your times tables well, the division facts will be easier. The times table chart can be used to find division facts.

To use the times table chart for division facts:

- Find the divisor in the column on the left of the times table chart.
- Run your finger in a straight line across the divisor row until you come to the dividend.
- Go straight up that column and the quotient should be the top number.

Try a few while you are doing Exercise 1.

**Exercise 1**

Complete this chart to help yourself understand the connection between multiplication and division. The first one is done for you. Check your work using the answer key at the end of the exercise.

Tip: Make a list of any errors that you made and the facts that you had to really think about. If you have any more than five facts on your list, ask your instructor for suggestions on learning and drilling the division facts.

## Remainders

You have been practicing the division facts that always work out evenly – nothing is left over.

Well, in the real world things are not usually so perfect!

You have 7 candies to share among your 3 children.

We call the left-over the remainder. For now, put R and the left over number after your quotient.

$$7 \div 3 = 2 \text{ R}1$$

$$\begin{array}{r} 2 \text{ R}1 \\ 3 \overline{)7} \end{array}$$

## Example A

Here are 22 cookies. Circle groups of 5. How many groups of 5 in 22?

You should have 4 groups with 2 left over.

$$22 \div 5 = 4 \text{ R}2$$

$$\begin{array}{r} 4 \text{ R}2 \\ 5 \overline{)22} \end{array}$$

The remainder must not be the same size or bigger than the divisor. If it is bigger, it means another group could be made.

## Example B

Here are 66 suns. Make groups of 9. How many groups of 9 in 66?

How many groups? 7

How many left over? 3

$$66 \div 9 = 7 \text{ R}3$$

$$\begin{array}{r} 7 \text{ R}3 \\ 9 \overline{)66} \end{array}$$

Tip: The remainder must **not** be the same size or bigger than the divisor. Why not? It would make another group.

### Exercise 5

Draw pictures to find the quotient and the remainder. Write each question using the other division sign as well. Have your instructor check your work.

a.  $23 \div 10 = 2 \text{ R}3$

$$\begin{array}{r} 2 \text{ R}3 \\ 10 \overline{)23} \end{array}$$

b.  $24 \div 7 =$

c.  $19 \div 3 =$

d.  $39 \div 12 =$

You cannot always draw pictures, so how should you find the quotients?

### Example C

$$29 \div 3 =$$

Use multiplication tables or the division facts to find a trial quotient. What can you multiply by 3 to find a number close to 29?

- $3 \times 9 = 27$
- $3 \times 10 = 30$

Use 9 as the trial quotient. Do not use 10 because  $3 \times 10 = 30$ , which is more than the dividend 29.

1. Divide.

$$\begin{array}{r} 9 \\ 3 \overline{)29} \end{array}$$

2. Multiply.  $9 \times 3 = 27$ . Write the product under the 29.

$$\begin{array}{r} 9 \\ 3 \overline{)29} \\ 27 \end{array}$$

3. Subtract 27 from 29 to find the remainder.

$$\begin{array}{r} 9 \\ 3 \overline{)29} \\ -27 \\ \hline 2 \end{array}$$

4. Check (compare) to be sure the remainder is less than ( $<$ ) the divisor.

$$2 < 3$$

$$29 \div 3 = 9 \text{ R}2$$

### Example D

$$60 \div 7 =$$

Think what can be multiplied by 7 to find a number close to 60.

- $7 \times 8 = 56$  (good)
- $7 \times 9 = 63$  (too big)

Use 8 as the trial quotient.

1. Divide.

$$\begin{array}{r} 8 \\ 7 \overline{)60} \end{array}$$

2. Multiply.

$$\begin{array}{r} 8 \\ 7 \overline{)60} \\ 56 \end{array}$$

3. Subtract.

$$\begin{array}{r} 8 \\ 7 \overline{)60} \\ -56 \\ \hline 4 \end{array}$$

4. Compare to be sure the remainder is less than the divisor.

$$4 < 7$$

$$60 \div 7 = 8 \text{ R}4$$

## Topic B: Divisibility

Divisibility is when two numbers can be divided without a remainder.

For example, 18 is divisible by 3 because  $18 \div 3 = 6$ .

18 is not divisible by 5 because  $18 \div 5 = 3$  with a remainder of 3.

### Divisibility by 2

A number is divisible by 2 if it ends in 0, 2, 4, 6 or 8.

#### Example A

438, 540, 256, 12, and 154 are all divisible by 2 because each number ends in a 0, 2, 4, 6, or 8.

#### Example B

351, 945, 849, 347, and 193 are not divisible by 2 because each number does not end in a 0, 2, 4, 6 or 8.

## Divisibility by 3

A number is divisible by 3 if the sum (total) of the digits is divisible by 3.

### Example C

63

$$6 + 3 = 9$$

9 is divisible by 3, so 63 is divisible by 3.

### Example D

148

$$1 + 4 + 8 = 13$$

13 is not divisible by 3, so 148 is not divisible by 3.

**Example E**

5 892

$$5 + 8 + 9 + 2 = 24$$

Add again:  $2 + 4 = 6$

6 is divisible by 3, so 5 892 is divisible by 3.

## Divisibility by 9

A number is divisible by 9 if the sum (total) of the digits is divisible by 9.

### Example H

135

$$1 + 3 + 5 = 9$$

9 is divisible by 9, so 135 is divisible by 9.

### Example I

7 578

$$7 + 5 + 7 + 8 = 27$$

27 is divisible by 9, so 7 578 is divisible by 9.

### Example J

57 896

$$5 + 7 + 8 + 9 + 6 = 35$$

35 is not divisible by 9, so 57 896 is not divisible by 9.

## Exercise 6

Circle the numbers that are divisible by 9. Check your work using the answer key at the end of the exercise.

- |        |          |           |

| c. 954 | g. 7 083 | k. 74 124 |
| d. 762 | h. 5 738 | l. 45 683 |

## Answers to Exercise 6

The following numbers are divisible by 9: 783, 954, 5 742, 7 083, 39 402, 74 124.

## Exercise 7

For each number, identify if it is divisible by 2, 3, 5, and 9. Check your work using the answer key at the end of the exercise.

## Topic C: Dividing Larger Numbers by One-Digit Divisors

Several methods are used to divide larger numbers. This book will only teach one method. If you have learned a different method for dividing, ask your instructor to review it with you. You can use the practice exercises in this workbook using whichever method you prefer.

### One-Digit Divisors without Remainders

Division has four steps which are repeated until the dividend is completely divided. Work through the three examples which show these steps.

1. Divide.
2. Multiply
3. Subtract and compare the remainder to the divisor.
4. Bring down the next digit in the dividend and repeat.

## Example A

$$294 \div 7 =$$

Rewrite as  $7 \overline{)294}$

**Step 1: Divide.**

Find a trial quotient using multiplication tables or division facts.

Look at the dividend one digit at a time.

- i. The first digit is a 2, which is really 2 hundreds.
- ii. Will 7 go into 2? Can you divide 2 by 7? No.
- iii. Look at the first 2 digits, 29, which is really 29 tens.
- iv. Will 7 go into 29? Yes.  $4 \times 7 = 28$ .

$$\begin{array}{r} 4 \\ 7 \overline{)294} \end{array}$$

The first number in the quotient is 4. Place the 4 in the quotient directly above the 9 tens. The 4 is 4 tens in the quotient.

**Step 2: Multiply.**

Multiply  $4 \times 7 = 28$ .

Write the 28 under the 29. Draw a line.

$$\begin{array}{r} 4 \\ 7 \overline{)294} \\ \underline{28} \end{array}$$

**Step 3: Subtract.**

Subtract  $29 - 28 = 1$  (ten).

Check  $1 < 7$ .

$$\begin{array}{r} 4 \\ 7 \overline{)294} \\ \underline{-28} \\ 1 \end{array}$$

**Step 4: Bring down the next number in the dividend.**

Bring down the next number in the dividend (4), and put it beside the result of the subtraction you just completed (1).

Together, they make 14. This 14 is the number that you must now divide.

$$\begin{array}{r} 4 \\ 7 \overline{)294} \\ -28 \\ \hline 14 \end{array}$$

**Repeat Step 1: Divide.**

- Divide  $14 \div 7 = 2$
- Put the 2 in the quotient right after the 4 in the ones place.

$$\begin{array}{r} 42 \\ 7 \overline{)294} \\ -28 \\ \hline 14 \end{array}$$

**Repeat Step 2: Multiply.**

- Multiply  $2 \times 7 = 14$ .
- Write the 14 under the 14. Draw a line.

$$\begin{array}{r} 42 \\ 7 \overline{)294} \\ -28 \\ \hline 14 \\ 14 \\ \hline \end{array}$$

**Repeat Step 3: Subtract.**

- Subtract  $14 - 14 = 0$ . There is 0 remainder.
- Check  $0 < 7$ .

$$\begin{array}{r} 42 \\ 7 \overline{)294} \\ -28 \\ \hline 14 \\ -14 \\ \hline 0 \end{array}$$

**There are no more numbers in the dividend to bring down, so you are done.**

$$294 \div 7 = 42$$

## Example B

$$128 \div 2 =$$

$$\begin{array}{r} 64 \\ 2 \overline{)128} \\ \underline{-12} \phantom{0} \\ 08 \\ \underline{-8} \\ 0 \end{array}$$

**Step 1: Divide.**

- a. Can 2 go into 1? No.
- b. Can 2 go into 12? Yes.
- c. How many times?
  - $2 \times 6 = 12$ ;  $12 \div 2 = 6$
- d. The first number in the trial quotient is 6. Put the 6 in the quotient directly above the 2 tens dividend.

**Step 2: Multiply.**

- a.  $6 \times 2 = 12$ .
- b. Write the 12 under the 12. Draw a line.

**Step 3: Subtract.**

- a.  $12 - 12 = 0$
- b. Check  $0 < 12$

**Step 4: Bring down the next number in the dividend.**

- a. Bring down the next number in the dividend (8), and put it beside the result of the subtraction you just completed (0).
- b. 8 is now the number to be divided.

**Repeat**

1. Divide:  $8 \div 2 = 4$
2. Multiple:  $4 \times 2 = 8$
3. Subtract:  $8 - 8 = 0$ 
  - a. Check  $0 < 2$
4. Bring down the next digit. There are no more digits in the dividend.

$$128 \div 2 = 64$$

## Example C

$$856 \div 8 =$$

$$8 \overline{)856}$$

**Divide**

Does 8 go into 8? Yes.  $8 \div 8 = 1$ .

$$\begin{array}{r} 1 \\ 8 \overline{)856} \end{array}$$

**Multiply**

$$1 \times 8 = 8$$

$$\begin{array}{r} 1 \\ 8 \overline{)856} \\ 8 \end{array}$$

**Subtract**

$8 - 8 = 0$ . Check  $0 < 8$ .

$$\begin{array}{r} 1 \\ 8 \overline{)856} \\ -8 \\ \hline 0 \end{array}$$

**Bring down the next digit**

5 is now the number to be divided.

$$\begin{array}{r} 1 \\ 8 \overline{)856} \\ -8 \\ \hline 05 \end{array}$$

Now repeat.

**Divide**

Does 8 go into 5? No.

You must put a zero to hold the place in the quotient. If a digit is brought down, a digit must be placed in the quotient.

$$\begin{array}{r} 10 \\ 8 \overline{)856} \\ -8 \\ \hline 05 \end{array}$$

**Multiply**

$$0 \times 8 = 0$$

$$\begin{array}{r} 10 \\ 8 \overline{)856} \\ -8 \\ \hline 05 \\ -0 \\ \hline \end{array}$$

**Subtract**

$$5 - 0 = 5. \text{ Check } 5 < 8.$$

$$\begin{array}{r} 10 \\ 8 \overline{)856} \\ -8 \\ \hline 05 \\ -0 \\ \hline 5 \end{array}$$

**Bring down the next digit**

56 is now the number to be divided.

$$\begin{array}{r} 10 \\ 8 \overline{)856} \\ -8 \\ \hline 05 \\ -0 \\ \hline 56 \end{array}$$

Now repeat.

**Divide**

Does 8 go into 56? Yes.  $56 \div 8 = 7$ .

Write 7 in the quotient in the ones place above the 6 in the dividend.

$$\begin{array}{r} 107 \\ 8 \overline{)856} \\ \underline{-8} \phantom{00} \\ 05 \phantom{0} \\ \underline{-0} \phantom{0} \\ 56 \end{array}$$

**Multiply**

$$7 \times 8 = 56$$

$$\begin{array}{r} 107 \\ 8 \overline{)856} \\ \underline{-8} \phantom{00} \\ 05 \phantom{0} \\ \underline{-0} \phantom{0} \\ 56 \end{array}$$

**Subtract**

$$56 - 56 = 0. \text{ Check } 0 < 8.$$

$$\begin{array}{r} 107 \\ 8 \overline{)856} \\ \underline{-8} \phantom{00} \\ 05 \phantom{0} \\ \underline{-0} \phantom{0} \\ 56 \\ \underline{-56} \\ 0 \end{array}$$

**Bring down the next digit.**

No more digits.

$$856 \div 8 = 107$$

## One-Digit Divisors with Remainders

Do the division exactly the same way that you have been learning. Often there is a remainder after the last subtraction. Write it with the quotient as you already know how to do.

### Example D

$$259 \div 8 =$$

$$\begin{array}{r} 32 \text{ R}3 \\ 8 \overline{)259} \\ \underline{-24} \phantom{0} \\ 19 \\ \underline{-16} \\ 3 \end{array}$$

$$259 \div 8 = 32 \text{ R}3$$

**Check Division by Multiplying**

To check your division, do this:

1. Multiply the quotient by the divisor.
2. Add on any remainder.

The product will equal the dividend if your arithmetic is correct.

**Example E**

## Topic D: Dividing by Two and Three Digit Divisors

### Finding Trial Quotients:

When dividing by 2-digit numbers, you will need to estimate the quotient. This guess is called a trial quotient.

#### Example A

$$624 \div 24$$

Rewrite as  $24 \overline{)624}$

#### Step 1: Divide

- a. Think:  $2 \overline{)6}$  is 3. So  $24 \overline{)62}$  is about 3.

#### Step 2: Multiply and subtract.

a. 
$$\begin{array}{r} 3 \\ 24 \overline{)624} \\ \underline{72} \end{array}$$

- b. Since  $72 > 62$ , 3 is too large.

#### Step 3: Try a smaller number, multiply and subtract.

a. 
$$\begin{array}{r} 2 \\ 24 \overline{)624} \\ \underline{48} \\ 14 \end{array}$$

- b. Since  $4 < 24$ , 2 is correct.

#### Step 4: Finish the problem.

## Example B

$$630 \div 15$$

Rewrite as  $15 \overline{)630}$

**Step 1: Divide**

a. 15 rounds to 20. Think:  $2 \overline{)6}$  is 3. So  $15 \overline{)63}$  is about 3.

**Step 2: Multiply and subtract.**

$$\begin{array}{r} 3 \\ 15 \overline{)630} \\ \underline{45} \\ 18 \end{array}$$

b. Since  $18 > 15$ , 3 is too small.

**Step 3: Try a larger number, multiply and subtract.**

$$\begin{array}{r} 4 \\ 24 \overline{)630} \\ \underline{60} \\ 3 \end{array}$$

b. Since  $3 < 15$ , 4 is correct.

**Step 4: Finish the problem.**

## Exercise 1

In each question, the trial quotient is either too large or too small. Multiply. Write too large or too small on the line. Then, write the correct trial quotient beside. Check your work using the answer key at the end of the exercise.

a.  $\begin{array}{r} 2 \\ 25 \overline{)475} \end{array}$

b.  $\begin{array}{r} 3 \\ 15 \overline{)682} \end{array}$

c.  $\begin{array}{r} 5 \\ 18 \overline{)813} \end{array}$

d. 
$$\begin{array}{r} 2 \\ 25 \overline{)810} \end{array}$$

i. 
$$\begin{array}{r} 3 \\ 25 \overline{)650} \end{array}$$

n.

### Answers to Exercise 1

- a. too large, 1
- b. too small, 4
- c. too large, 4
- d. too small, 3
- e. too large, 2
- f. too small, 4
- g. too large, 2
- h. too large, 1

- i. too large, 2
- j. too small, 5
- k. too large, 3
- l. too large, 1
- m. too large, 2
- n. too large, 3
- o. too large, 3
- p. too small, 4

- q. too large, 2
- r. too large, 1
- s. too large, 1
- t. too large, 1
- u. too large, 2
- v. too small, 3

#### Example C

$$78 \overline{)2706}$$

Since 78 rounds to 80, think  $8 \overline{)27}$ . 8 goes into 27  $\approx$  3. 3 would be a good trial quotient.

$$\begin{array}{r} 3 \\ 78 \overline{)2706} \\ \underline{234} \\ 36 \end{array}$$

Since  $36 < 78$ , 3 is a good trial quotient.

## Example D

$$27 \overline{)2205}$$

Since 27 rounds to 30, think  $3 \overline{)22}$ . 3 goes into 22  $\approx$  7. 7 would be a good trial quotient.

$$\begin{array}{r} 7 \\ 27 \overline{)2205} \\ \underline{189} \\ 31 \end{array}$$

Since  $31 > 27$ , so 7 is too small. A better trial quotient would be 8.

## Exercise 2

Find the first digit in the trial quotient. Check your work using the answer key at the end of the exercise.

a.  $43 \overline{)1772}$       $4 \overline{)17}$  .1 < 4

## Two Digit Divisors

Dividing by large divisors is a challenge!

You must **estimate** how many times one number will divide into another. Use pencil and have an eraser close by when you do these questions. You will use the same steps that you already know.

### Example E

$$964 \div 75 =$$

#### Step 1: Divide

1. Does 75 go into 9? **NO**
2. Does 75 go into 96? **YES**
3. Estimate
  1. Round 75 to 80 – think “8”
  2. Round 96 to 100 – think “10”
  3. How many 8’s in 10? Just 1.
  4. The estimate for the first digit in the trial quotient is 1.
4. Write **1** in the quotient above the 6 tens.

$$\begin{array}{r} 1 \\ 75 \overline{)964} \end{array}$$

**Step 2: Multiply**

$$1 \times 75 = 75$$

1. Write 75 under 96.

$$\begin{array}{r} 1 \\ 75 \overline{)964} \\ \underline{75} \end{array}$$

**Step 3: Subtract**

$$96 - 75 = 21$$

1. Check  $21 < 75$ ? **YES!**

$$\begin{array}{r} 1 \\ 75 \overline{)964} \\ \underline{75} \\ 21 \end{array}$$

**Step 4: Bring down the next digit** from the dividend. Now divide 214.

$$\begin{array}{r} 1 \\ 75 \overline{)964} \\ \underline{75 \downarrow} \\ 214 \end{array}$$

**REPEAT****Step 1: Divide**

1. Does 75 go into 214? **YES**
2. Estimate 75 as 80 – think “8”
  1. Estimate 214 as 200 – think “20”
  2. 8 goes into 20 2 times ( $8 \times 2 = 16$ , so  $20 \div 8 = 2$ )
3. The estimate for the second digit in the trial quotient is 2. Write 2 in the quotient

above the 4 in the dividend.

$$\begin{array}{r} 12 \\ 75 \overline{)964} \\ \underline{75 \phantom{0}} \\ 214 \end{array}$$

**Step 2: Multiply**

$$2 \times 75 = 150$$

1. Write 150 under the 214.

$$\begin{array}{r} 12 \\ 75 \overline{)964} \\ \underline{75 \phantom{0}} \\ 214 \\ \underline{150} \end{array}$$

**Step 3: Subtract and check** that the remainder is less than the divisor.

$$\begin{array}{r} 12 \\ 75 \overline{)964} \\ \underline{75 \phantom{0}} \\ 214 \\ \underline{150} \\ 64 \end{array}$$

**Step 4: Bring down** – no more digits in dividend.

To check your answer

$$\begin{array}{r}
 75 \\
 \times 12 \\
 \hline
 150 \\
 750 \\
 \hline
 900 \\
 + 64 \\
 \hline
 964
 \end{array}$$

### Exercise 3

Carefully divide these questions. Be careful to keep the hundreds in line with the hundreds, the tens with the tens, and so on. You might want to use squared paper for long division.

If you are having **any** difficulty, ask your instructor to watch you doing a few questions to be sure you are using a correct method.

**If the estimate for your trial quotient is too large the result of the multiplication will be larger than the numbers in the dividend.**

1. **Divide:** Trial estimate is 4.

2. **Multiply:**

1.  $4 \times 23 = 92$

2. 92 is larger than 78, so 4 is too large an estimate. Erase it. Try 3.

$3 \times 23 = 69$

3. 3 is the correct estimate and you can complete the division.

1.	$23 \overline{)784}$
2.	$\begin{array}{r} 4 \\ 23 \overline{)784} \\ \underline{92} \end{array}$

**If the estimate is too small, the result of the subtraction will be larger than the divisor.**

1. **Divide:** Trial estimate is 5.
2. **Multiply:**  $5 \times 72 = 360$
3. **Subtract:**
  1.  $448 - 72 = 360$
  2. Check  $88 < 72$ ? **NO**, 88 is greater than 72.
  3. So 5 is too small. Erase it and use a larger number. 6 will be a better estimate.
4. **Divide:**  $448 \div 72 \approx 6$
5. **Multiply:**  $6 \times 72 = 432$
6. **Subtract:**
  1.  $448 - 432 = 16$
  2. Check  $16 < 72$ ? **YES!**
7. **Bring down the next digit** and complete the division.

1.	$72 \overline{)4487}$
2.	$\begin{array}{r} 5 \\ 72 \overline{)4487} \\ \underline{360} \\ 88 \end{array}$

**Dividing by 10, 100, 1000...**

What is the pattern? When you divide by 10

1. The ones digit in the dividend becomes the remainder.

$$10 \overline{)324} = 32R4$$

2. The other numbers in the dividend stay the same but each digit is one place value less.
  - the hundreds become tens
  - the tens become ones
  - the ones become the remainder

## Three Digit Divisors

If the divisor has three digits, use the method you know for two-digit divisors, but estimate the divisor to the nearest hundred to find the trial quotient. Be very **careful** to put the first digit in the quotient in the correct place.

### Example F

$$17\,902 \div 381 =$$

#### Step 1: Divide

1. Does 381 go into 1? NO
2. Does 381 go into 17? NO
3. Does 381 go into 179? NO
4. Does 381 go into 1 790? YES
5. Estimate 381 as 400. Think 4.
6. Estimate 1 790 as 1 800. Think 18.
7. 4 goes into 18  $\approx$  4 times ( $4 \times 4 = 16$ )
8. Your estimate is 4. Write 4 in the quotient above the 0 in the dividend.

$$\begin{array}{r} 4 \\ 381 \overline{)17902} \end{array}$$

#### Step 2: Multiply

1.  $4 \times 381 = 1\,524$

$$\begin{array}{r} 4 \\ 381 \overline{)17902} \\ \underline{1524} \end{array}$$

#### Step 3: Subtract

1.  $1\,790 - 1\,524 = 266$
2. Check  $266 < 381$ ? YES!

$$\begin{array}{r} 4 \\ 381 \overline{)17902} \\ \underline{1524} \\ 266 \end{array}$$

**Step 4: Bring down** the 2. 2 662 is now the number to be divided

$$\begin{array}{r} 4 \\ 381 \overline{)17902} \\ \underline{1524 \downarrow} \\ 2662 \end{array}$$

### REPEAT

**Step 1: Divide**  $2662 \div 381 =$

1. Estimate 381 as 400. Think of 4.
2. Estimate 2 662 as 2 700. Think 27.
3. 4 goes into 27  $\approx$  6 times ( $4 \times 6 = 24$ ).
4. Place this estimate in the quotient above the 2

$$\begin{array}{r} 4 \\ 381 \overline{)17902} \\ \underline{1524 \downarrow} \\ 2662 \end{array}$$

**Step 2: Multiply**

1.  $6 \times 381 = 2\,286$

$$\begin{array}{r} 46 \\ 381 \overline{)17902} \\ \underline{1524 \downarrow} \\ 2662 \\ \underline{2286} \end{array}$$

**Step 3: Subtract**

1.  $2\,662 - 2\,286 = 376$
2. Check  $376 < 381$ ? YES!

$$\begin{array}{r}
 46 \\
 381 \overline{)17902} \\
 \underline{1524} \downarrow \\
 2662 \\
 \underline{2286} \\
 376
 \end{array}$$

**Step 4: No more digits to bring down.**

$$17\,902 \div 381 = 46 \text{ R}376$$

## Topic E: Estimating Quotients

### Divide Numbers That Both End With Zeros

In Unit 1 you learned a shortcut for multiplying numbers that end with zeros.

Now you will learn a shortcut to divide numbers that **both** end with zeros. First do this exercise and notice the pattern in the quotients.

#### Exercise 1

Divide. Check your work using the answer key at the end of the exercise.

a.  $2\overline{)6}$

d.  $2000\overline{)6000}$

g.  $500\overline{)2500}$

b.  $20\overline{)60}$

**Here is the shortcut:**

When dividing numbers that both end with zeros, cross off the **same number of zeros** from the end of the divisor and the dividend. This is sometimes called **canceling zeros**.

Example A

$$4800 \div 60 = 480 \cancel{0} \div 6 \cancel{0}$$

$$\begin{array}{r} 80 \\ 6 \overline{)480} \end{array}$$

## Example B

$$23000 \div 500 = 230\cancel{00} \div 5\cancel{00}$$

$$\begin{array}{r} 46 \\ 5 \overline{)230} \\ \underline{20} \downarrow \\ 30 \\ \underline{30} \\ 0 \end{array}$$

## Example C

$$2\cancel{000} \overline{)680\cancel{000}}$$

$$\begin{array}{r} 340 \\ 2 \overline{)680} \\ \underline{6} \downarrow \\ 08 \\ \underline{8} \downarrow \\ 00 \\ \underline{0} \\ 0 \end{array}$$

If you are interested in the facts of arithmetic that make this shortcut work, ask your instructor for an explanation.

## Exercise 2

Quickly find the quotients. Remember to cancel the **same number** of zeros in both the divisor and dividend in each question. Check your work using the answer key at the end of the exercise.

a.  $30 \overline{)90}$

d.  $400 \overline{)20000}$

g.  $60000 \overline{)2400000}$

b.  $40 \overline{)1600}$

e.  $500 \overline{)35000}$

h.  $800000 \overline{)400000000}$

c.  $300 \overline{)1200}$

f.  $700 \overline{)42000}$

**Answers to Exercise 2**

a. 3

d. 50

g. 40

b. 40

e. 70

h. 500

c. 4

f. 60

## Rounding Division Questions to Estimate

**We round numbers and estimate to get a quick answer.**

In division, round the divisor and dividend **before** you divide.

1. If the divisor only has one digit, do not round it,
2. Round the dividend to make the arithmetic easier for yourself.

### Example D

Look at the two ways of rounding this question.

$$1796 \div 32 =$$

The divisor (32) will round to 30. This dividend (1796) can be rounded to 1800 or to 2000. Let's try each:

Round to 1800.

$$\begin{array}{r} 60 \\ 3\cancel{0} \overline{)180\cancel{0}} \end{array}$$

Round to 2000.

$$\begin{array}{r} 66 \text{ R}2 \\ 3\cancel{0} \overline{)200\cancel{0}} \\ \underline{18 \downarrow} \\ 20 \\ \underline{18} \\ 2 \end{array}$$

Rounding 1796 to 1800 is easier arithmetic because  $18 \div 3$  works out evenly, so  $180 \div 3$  works out evenly. Both estimates are correct.

## Example E

$$2\,688 \div 28 =$$

1. Round the divisor (28) to 30.
2. Round the dividend (2688) to 2700 or to 3000.

Round to 2700	$\begin{array}{r} 90 \\ 30 \overline{)2700} \end{array}$
Round to 3000	$\begin{array}{r} 100 \\ 30 \overline{)3000} \end{array}$

Both estimates are correct and both are easy to do.

## Example F

$$2\,893 \div 47 =$$

1. Round the divisor (47) to 50.
2. Round the dividend (2 893) to 2 900 or 3 000.
3. Which rounded dividend will be easier to divide by 50?

1. Answer: The 3000 because 5 goes evenly into 30.

$$\begin{array}{r} 60 \\ 50 \overline{)3000} \end{array}$$

## Exercise 3

Give an estimated quotient. Show your rounding.

a.  $365 \overline{)27692}$

e.  $56 \overline{)4792}$

i.  $19 \overline{)1672}$

b.  $23 \overline{)34459}$

f.  $75 \overline{)7648}$

j.  $200 \overline{)20000}$

c.  $45 \overline{)4590}$

g.  $81 \overline{)4049}$

k.  $557 \overline{)41680}$

d.  $16 \overline{)6729}$

h.  $68 \overline{)5636}$

**Answers to Exercise 3**

a.  $28\ 000 \div 400 = 70$

e.  $4\ 800 \div 60 = 80$

i.  $2\ 000 \div 20 = 100$

b.  $34\ 000 \div 20 = 1700$

f.  $8\ 000 \div 80 = 100$

j.  $20\ 000 \div 200 = 100$

c.  $5\ 000 \div 50 = 100$

g.  $4\ 000 \div 80 = 50$

k.  $42\ 000 \div 600 = 70$

d.  $7\ 000 \div 20 = 350$

h.  $5\ 600 \div 70 = 80$

## Topic E: Self-Test

Mark /6 Aim 5/6

A. Give an estimated quotient. Show your work. (6 marks)

a.  $98 \overline{)8541}$

c.  $241 \overline{)26348}$

e.  $24 \overline{)1776}$

b.  $27 \overline{)2963}$

d.  $55 \overline{)3276}$

f.  $59 \overline{)11830}$

## Answers to Topic E Self-Test

A. Give an estimated quotient. Show your work.

a.  $8\,500 \div 100 = 85$

c.  $26\,000 \div 200 = 130$

e.  $2\,000 \div 20 = 100$

b.  $3\,000 \div 30 = 100$

d.  $3\,000 \div 60 = 50$

f.  $12\,000 \div 60 = 200$

## Topic F: Division Problems

Review [Topic F: Problem Solving](#) in *Adult Literacy Fundamentals Mathematics: Book Two*.

One common type of division problem gives a total amount for **several** things and asks you to **find** what the amount would be for **one**.

Problems may tell you...	and ask you to find...
kilometres driven in 8 hours (h)	km driven in 1 h
cost for 15 kg (or litres, etc.)	cost for one kg
pay for 40 hours	pay for one hour
rent for one year (12 months)	rent for one month
work done in eight hours	work done in one hour
kilometres driven on 55 L of gas	km driven on 1 L of gas

The word *per* is a Latin word meaning “for each”. For example, “Find the kilometres *per* hour” may be used to mean, “Find the kilometres driven in one hour.” A slash (/) also means *per* e.g. km/h.

**“Find the average”** is another way of asking you to find the amount for one.

It may be difficult to decide which number is the dividend and which is the divisor. These suggestions should help:

- Look at the question in the problem. What do you have to find out? Look for the words “per” and “for one.”
- How will the answer be written? That is your clue. If the answer is km/h then the division equation will be total km  $\div$  h. Study these examples:
  - total of kilometres  $\div$  number of hours =  $km/h$
  - total of kilometres  $\div$  number of litres =  $km/L$

- $\text{total cost} \div \text{unit} = \text{cost per unit}$
  - $\text{total pay} \div \text{hours (or days, etc.)} = \text{pay per hour}$
  - $\text{total rent} \div \text{number of months} = \text{rent/month}$
  - $\text{total things done} \div \text{total time} = \text{number done/unit of time}$
- Do a quick estimate.
  - Look at your estimate and re-read the problem. Does your answer make sense?

To **find the average**, divide the total amount by the number of items that make up the total. You may first have to add the different items together to find the total.

Average = Total amount divided by the number of items that make the total

#### Example A

You bowled 5 games with scores of 124, 187, 164, 205, 130. What was your average score?

1. Find the total by adding  $124 + 187 + 164 + 205 + 130 = 810$
2. Divide the total by number of items  $810 \div 5 \text{ games} = 162 \text{ per game}$

**Example B**

Joan and Rick have been keeping track of their household costs. They want to plan a monthly budget. Their grocery bills for six months were \$428, \$605, \$397, \$530, \$590, and \$474. What is their average monthly grocery cost?

1. Find the total amount.

$$\$428 + \$605 + \$397 + \$530 + \$590 + \$474 = \$3\,024$$

2. Divide total amount by number of items.

$$\$3\,024 \div 6 = \$504 \text{ average cost per month}$$

Some details to remember:

- 1 minute = 60 seconds
- 1 hour = 60 minutes
- 1 year = 365 days
- 1 year = 12 months
- 1 year = 52 weeks

Key words that point to division:

- Find the average
- Separated
- Find the \_\_\_\_ per \_\_\_\_
- Split
- Find the unit price
- Shared

## Exercise 1

Solve these problems. Use the five problem solving steps. Be sure to write down an estimate and check that the estimate makes sense **before** you find the actual solution. Check your work using the answer key at the end of the exercise.

a. A machine shop can stamp out 360 car parts in an 8 hour work day. How many parts is that per hour?

b. Izyan paid \$560 for 4 tires. How much did each tire cost?

c. Bjork earned \$8 840 in 4 months.

i. How much did he earn each month?

f. Diego worked 8 hours a day for five days and earned \$360. How much was he paid per hour? (This is a two-step problem – you must first find the total number of hours.)

g. Dae-Hyun and Mi-Ok can afford no more than a total of \$14 940 per year for rent, electricity, and phone. How much can they pay per month?

### Answers to Exercise 1

- a. 45 parts per hour
- b. \$140 per tire
  - i. \$2,210 per month
  - ii. \$520 per week
- c. 23 km/L
- d. \$620 per payment

e. \$9 per hour

f. \$1,245 per month

A second type of division problem gives the total amount and the size of each group. You will find the number of groups. You will notice that **both numbers have the same units**. The **answer** to the problem **will give another unit**. This other unit will be asked for in the problem.

### Example C

One necklace uses **125 beads**. How many necklaces can Susan make for the craft fair if she has **6 250 beads**?

Find how many groups of 125 there are in 6 520.

$$6\,250 \div 125 =$$

$$\begin{array}{r} 50 \\ 125 \overline{)6250} \\ \underline{625} \phantom{0} \\ 0 \end{array}$$

She can make **50 necklaces**.

### Example D

If you drive an average speed of 80 km an hour, how many hours will it take you to drive 560 km?

Find how many groups of 80 km there are in 560 km.

$$56\cancel{0} \div 8\cancel{0} = 7$$

The 560 km trip will take 7 hours.

- d. If you spend an average of 8 minutes on one math problem, how many problems can you finish in one hour? Will you have any time left? How much?
- e. The Skating Club members decided to sell homemade fudge to raise money. The boxes they bought will hold 45 pieces of fudge. If everyone makes a double batch of fudge they will have 2 590 pieces. How many boxes can they fill? How many pieces of fudge are left-over for them to eat?
- f. A class of 334 students is going to Victoria by bus. Each bus holds 43 passengers. How many buses do they need? Will there be any empty seats? (Be careful with this one!)

**Answers to Exercise 2**

- a. 6 hours  
 b. 8 L  
 c. 29 parking spaces  
 d. 7 problems, yes, 4 min  
 e. 57 boxes, 25 pieces left over  
 f. 8 buses, 10 empty seats

**Unit Pricing**

A unit price is the price for one of something. To find unit price, divide the total cost by the number of things bought.

**Example E**

5 shirts cost \$60

To find the cost per shirt,  $\$60 \div 5 =$

$$\begin{array}{r} 12 \\ 5 \overline{)60} \end{array}$$

The unit price is \$12.

**Example F**

6 L of oil for \$18

To find the cost per L,  $\$18 \div 6 =$

$$\begin{array}{r} 3 \\ 6 \overline{)18} \end{array}$$

The unit price is \$3.

### Exercise 3

Solve the cost per unit price. Check your work using the answer key at the end of the exercise.

a. 2 CDs for \$26

f. 2 cans of peanuts for \$8

b. 3 cans of dog food for \$6

g. 2 ice cream for \$12

c. 4 air fresheners for \$8

h. 4 boxes of chocolate bars for \$48

d. 2 cat treats for \$4

i. 2 WD-40 for \$6

e. 2 pizzas for \$22

j. 3 paint rollers for \$9

k. 4 tie downs for \$20

m. 3 work shirts for \$45

l. 3 boxes of diapers for \$51

n. 8 pairs of socks for \$64

### Answers to Exercise 3

a. \$13

h. \$12

b. \$2

i. \$3

c. \$2

j. \$3

d. \$2

k. \$5

e. \$11

l. \$17

f. \$4

m. \$15

g. \$6

n. \$8

## Best Buy

The **best buy** is the **lowest unit price**.

### Example G

You can buy 4 L of canola oil for \$8 or 10 L of canola oil for \$30. Which is the best buy?

$\$8 \div 4 =$  can be rewritten and solved: 
$$\begin{array}{r} 2 \\ 4 \overline{)8} \end{array}$$

$\$30 \div 10 =$  can be rewritten and solved: 
$$\begin{array}{r} 3 \\ 10 \overline{)30} \end{array}$$

4 L of canola oil for \$8 is a better buy since the unit price is \$2 per L, while 10 L for \$30 has a unit price of \$3 per L.

### Exercise 4

Solve the unit price and then underline the best buy.

a. 2 L of engine oil for \$8 or 5 L of engine oil for \$15

b. 4 tires for \$240 or 2 tires for \$110

c. 6 jars of salad dressing for \$24 or 3 jars of salad dressing for \$15

d. 7 kg of dog food for \$21 or 16 kg of dog food for \$32

e. 3 DVDs for \$54 or 7 DVDs for \$119

f. 3 L of laundry soap for \$6 or 17 L of laundry soap for \$68

**Answers to Exercise 4**

- a. \$4, \$3, 5 L for \$15 is the best buy.      d. \$3, \$2, 16 kg for \$32 is the best buy.
- b. \$60, \$55, 2 tires for \$110 is the best buy.      e. \$18, \$17, 7 DVDs for \$119 is the best buy.
- c. \$4, \$5, 6 salad dressing for \$24 is the best buy.      f. \$2, \$4, 3 L for \$6 is the best buy.

- c. The proud gardener grew a total crop of 135 cucumbers on 15 plants. What was the average crop per plant?
- d. In a recent truckload sale, electric stoves were sold for \$432. The gross income from the stove sale was \$42 336. How many stoves were sold?
- e. The 39 farmers in Jones Valley had a total income last year of \$2 905 500. What was their average income?

- f. A store has an inventory (stock on hand) of chairs with a total value of \$1 738. Each chair is to be sold at \$79. How many of these chairs are there?

### Answers to Topic F Self-Test

- |                          |              |
|--------------------------|--------------|
| a. 80 km/h               | d. 98 stoves |
| b. \$3 237 per month     | e. \$74 500  |
| c. 9 cucumbers per plant | f. 22 chairs |

## Topic G: Mixed Problems

Carefully read again the **Problem Solving Steps** in [Adult Literacy Fundamentals Mathematics: Book Two](#), Topic F or ask your instructor for a copy of those pages. Read the problems to get a feel for the wording and types of problem situations you can expect for addition, subtraction, multiplication, and division problems. Ask your instructor for a list of key words that will point to the operation you should choose.

### Exercise 1

Solve these problems using the five problem solving steps. Show your estimation and actual work. Write a sentence answer remembering to use the **units**. Check your work using the answer key at the end of the exercise.

- a. Saika gave her students cinnamon hearts on Valentine's Day. She bought a box of 120 cinnamon hearts and gave each student 35 candies, using up the whole box. How many students does she have?

- b. Each stamp cost 57 cents. Dolores bought 100 stamps. How much money did she spend on stamps (before taxes)?
- c. Etienne planted 30 tomato plants in rows of 5 plants. How many rows did he plant?
- d. There are 8 servings per large economy-size can of fruit. The restaurant ordered 5 cases with 24 cans per case. How many servings of fruit can the restaurant get from this order? (This is a two step problem – first find the total number of cans. Then use that number to find the number of servings.)

- e. A train traveled 2 250 km at a speed of 75 km per hour. How many hours did the trip take?
- f. The regular mountain bike costs \$499 and the fancy model is \$675. How much more do you pay for the fancy mountain bike?
- g. The members of the Shiny Wheels Bicycle Club ride at an average speed of 16 km/h. On their weekend trip, they rode 2 hours Friday night, 7 hours on Saturday, took a two hour break to soak their aching bones at the Hot Springs, and then rode a final 5 hours on Sunday. How many kilometres did they ride on this weekend trip? (2 steps)

- h. Last week Mrs. Sanderson drove 29 km on Monday, 42 km on Tuesday, 5 km on Wednesday, and 21 km on Friday. How far did she drive last week?

### Answers to Exercise 1

- |                 |               |
|-----------------|---------------|
| a. 32 students  | e. 30 hours   |
| b. \$57.00      | f. \$176 more |
| c. 6 rows       | g. 224 km     |
| d. 960 servings | h. 97 km      |

## Unit 2 Review: Division

You will now practice all the skills you learned in Unit 2. Check your work using the answer key at the end of the review.

A. Complete this chart

**CONGRATULATIONS!!**

Now you have finished Unit 2.

**TEST TIME!**

Ask your instructor for the practice test for this unit.

Once you've done the practice test, you need to do the unit 2 test. Again, ask your instructor for this.

Good luck!

# Unit 3: Change and The Metric System

## Topic A: Counting to Make Change

Practice your counting by filling in the counting chart. Have your instructor check your chart when you are done.

0	1	2	3	4	5	6	7	8	9
10									

Use your counting chart and start at 0. Count by twos and write down that number.

0	2	4							

If you had a pile of toonies or two dollar coins and wanted to know how much money you have, you would count by 2's.

Use your counting chart and start at 0. Count by fives and write down that number.

0	5	10	

If you had a pile of nickels or five dollar bills and wanted to know how much money you have, you would count by 5's.

Use your counting chart and start at 0. Count by tens and write down that number.

0	10	20	

If you had a pile of dimes or ten dollar bills and wanted to know how much money you have, you would count by 10's.

Use your counting chart and start at 0. Count by twenty and write down that number.

0	20	40			
---	----	----	--	--	--

If you had a pile of twenty dollar bills and wanted to know how much money you have, you would count by 20's.

Use your counting chart and start at 0. Count by twenty-fives and write down that number.

0	25			
---	----	--	--	--

If you had a pile of quarters and wanted to know how much money you have, you would count by 25's.

## Topic B: Making Change

When you make change, your first goal is to get a number that ends in 0 or 5. For example, if you bought something for \$4, the first thing to do would be to get to \$5. Check out Example A below.

### Example A

\$4 to \$5

To get from \$4 to \$5, you would need 1 loonie.

### Example B

\$23 to \$25

To get from \$23 to \$25, you would need 1 toonie.

### Example C

\$55 to \$60

To get from \$55 to \$60, you would need 1 five dollar bill.

### Exercise 1

Circle the number of coins or bills you would need to get from the first number to the second number. Make sure to use the least number of coins or bills. Check your work using the answer key at the end of the exercise.

a. \$33 to \$35

b. \$48 to \$50

c. \$16 to \$20

d. \$68 to \$70

e. \$10 to \$15

f. \$35 to \$40

g. \$55 to \$60

h. \$85 to \$90

i. \$60 to \$70

j. \$90 to \$100

k. \$30 to \$40

l. \$40 to \$50

m. \$30 to \$50

n. \$70 to \$80

o. \$80 to \$100

p. \$45 to \$50

q. \$21 to \$25

r. \$55 to \$60

s. \$45 to \$50

t. \$40 to \$50

u. \$70 to \$80

### Answers to Exercise 1

## Topic C: The Metric System

When you measure something, you are **comparing**. Measurement is comparing something with a **standard unit of measure**.

In the past, units of measure were based on things found in a community. Often, lengths of parts of the body were used to measure:

- Inch: the width of a thumb
- Span: the distance from tip of thumb to tip of little finger when the hand is spread out
- Foot: the distance from big toe to heel of foot
- Yard (becomes “rod”): the distance from tip of nose to tip of thumb of an outstretched hand and arm
- Cubit: the distance from the tip of the middle finger to the elbow
- Fathom: the distance from the tip of one hand to the tip of the other with both arms stretched out
- Mile: 1000 military double steps in the Roman army (*mile passuum* means “1000 paces”)

The problem with these units was the distances would be different based on the size of the person doing the measuring. The problem grew even more when trade was started between cities.

Over a long period of time, people in different countries came up with different standard units of measure.

The British came up with **imperial units** such as inch, foot, yard and mile.

The French came up with **metric units** such as metre, centimetre, litre and gram. In Canada, we use both metric and imperial units.

## Measuring Length

The basic unit of measure for length is the **metre** (abbreviation **m**). If you stretch your arm straight out beside you, a **metre** is about the distance from the tip of your nose to the tip of your middle finger.

### Exercise 1

Consider the following distances. Answer yes or no if you would use a metre to measure. Check your work using the answer key at the end of the exercise.

#### Example:

- The length of a table – Yes
  - The width of your watchband – No
- a. length of your classroom
  - b. thickness of a piece of paper
  - c. length of your pen or pencil
  - d. height of the door
  - e. distance from Prince George to Fort Nelson
  - f. the width of your baby finger

- g. the size of a postage stamp
- h. the thickness of a quarter
- i. the length of the hallway outside your classroom
- j. the distance from your home to college
- k. the height of your coffee mug
- l. the width of your book
- m. the distance from your home to Moncton, New Brunswick
- n. the length of a city bus

### Answers to Exercise 1

- |        |        |
|--------|--------|
| a. yes | h. no  |
| b. no  | i. yes |
| c. no  | j. no  |
| d. yes | k. no  |
| e. no  | l. no  |
| f. no  | m. no  |
| g. no  | n. yes |

## Exercise 2

Estimate the length of each item. Remember a metre is about the distance from the tip of your nose to the tip of your middle finger when your arm is stretched out beside you. Be sure to include the unit of measure in your answer. Have your instructor check your work.

- a. the height of the doorway
- b. the height of your table
- c. the width of the doorway
- d. the length of your arm
- e. the distance from the floor to hip
- f. the distance from the floor to waist
- g. the height of the ceiling
- h. the width of the window
- i. the length of your classroom
- j. the width of your classroom

### Exercise 3

Circle the most reasonable measure. Remember a metre is about the distance from the tip of your nose to the tip of your middle finger when your arm is stretched out beside you. Check your work using the answer key at the end of the exercise.

- |                          |                                 |
|--------------------------|---------------------------------|
| a. A person's height     | d. The length of a bed          |
| i. 2m                    | i. 200 m                        |
| ii. 20m                  | ii. 2 m                         |
| iii. 200m                | iii. 20 m                       |
| b. The height of a child | e. The height of a building     |
| i. 10 m                  | i. 1 m                          |
| ii. 100 m                | ii. 100 m                       |
| iii. 1 m                 | iii. 10 m                       |
| c. The length of a house | f. The height of a refrigerator |
| i. 150 m                 | i. 20 m                         |
| ii. 15 m                 | ii. 200 m                       |
| iii. 1 m                 | iii. 2 m                        |

### Answers to Exercise 3

| a. i   | d. ii  |
| b. iii | e. ii  |
| c. ii  | f. iii |

## Measuring Small Lengths and Long Distances

It is hard to measure small things using a metre. To measure small things, you can use **centimetre (cm)** or **millimetre (mm)**.

A **centimetre (cm)** is about the width of your baby finger. Remember it is just a guide. A **millimetre (mm)** is about the thickness of your fingernail.

It is hard to measure long distances using a metre. To measure long distances, you can use **kilometre (km)**. A kilometre is 1000 metres.

### Exercise 4

For each item, circle the unit of measure you would use. Check your work using the answer key at the end of the exercise

	Item	Unit of Measure
a)	the width of a room	m, cm, mm
b)	the thickness of a coin	m, cm, mm
c)	the length of your pencil	m, cm, mm
d)	the length of the hall	m, cm, mm
e)	the length of this page	m, cm, mm
f)	the length of a screw	m, cm, mm
g)	the height of your cup	m, cm, mm
h)	the length of a bus	m, cm, mm
i)	the thickness of a window pane	m, cm, mm
j)	the width of a chair	m, cm, mm

### Exercise 6

Fill in the blank with the most reasonable unit of measure. Check your work using the answer key at the end of the exercise

- Most hand held calculators are about 15 \_\_\_\_ long.
- The CN Tower in Toronto is 555 \_\_\_\_ tall.
- Many young men have an 80 \_\_\_\_ waist.
- Computer monitor screens are 28 \_\_\_\_ wide.
- The handle of a hammer is 20 \_\_\_\_ long.
- A table is about 65 \_\_\_\_ long.
- The seat of a chair is about 30 \_\_\_\_ above the floor.
- The window is about 3 \_\_\_\_ long.
- A roll of tape is about 13 \_\_\_\_ wide.
- A rope is about 7 \_\_\_\_ thick.

## Measuring Capacity (Volume)

Volume is a measure of how much space something takes up. The basic unit of measure for volume is the **Litre (L)**.

Can you think of two things that we buy in litres? We buy gasoline and milk in litres.

We use **millilitres (mL)** to measure small volumes. For example, a small cup of coffee is about 180 mL. Can you think of two things we buy in mL?

### Exercise 7

Write the unit of measure you would use to measure each item (L or mL). Check your work using the answer key at the end of the exercise.

## Measuring Mass

Mass is a measure of matter in something. The basic unit of measure for mass is the **gram (g)**. We buy sliced meats, bulk food, spices and cereal in grams.

We use **kilogram (kg)** to measure the mass of large things such as cars, people, flour and sugar. Can you think of two things that we buy in kilograms?

We use **milligram (mg)** to measure the mass of small things such as medicine or vitamins. A **milligram** is very small. Can you think of two things that we buy in milligrams?

### Exercise 9

Circle the unit of measure you would use to measure each item. Check your work using the answer key at the end of the exercise

	Item	Unit of Measure
a)	Pasta	mg, g, kg
b)	Vitamin C	mg, g, kg
c)	Peanut butter	mg, g, kg
d)	Flour	mg, g, kg
e)	Dry dog food	mg, g, kg
f)	Cookies	mg, g, kg
g)	Apples	mg, g, kg
h)	Spices	mg, g, kg

## Metric Prefixes

In the metric system a prefix is used to tell if something is large or small. A **prefix** is a part of a word that is added to the start of word to change the meaning.

The base units of measure in the metric system are the **metre (m)**, **litre (L)** and **gram (g)**.

If the prefix **kilo** is added to one of the base units of measures, such as kilometre or kilogram, you know that these are large amounts.

A **kilometre** is 1 000 metres.

A **kilogram** is 1 000 grams.

If the prefix **centi** or **milli** is added to one of the base units of measure, such as centimetre or milligram, you know that these are small amounts.

It takes 100 **centimetres** to make a metre. It takes 1 000 **milligrams** to make a gram.

Measures	Large	Base	Small
Length	kilometre (km)	metre (m)	centimetre (cm) millimetre (mm)
Volume		litre (L)	millilitre (mL)
Mass	kilogram (kg)	gram (g)	milligram (mg)

## Exercise 11

Write large, small or base on the line. Check your work using the answer key at the end of the exercise.

## Exercise 13

Write the unit of measure you would use for each item below. Check your work using the answer key at the end of the exercise.

- |  |                                       |
|--|---------------------------------------|
| a. Coffee in a cup – <i>millilitres (mL)</i> | f. Thickness of glass                 |
| b. Bag of potatoes                           | g. Width of a page                    |
| c. Gas for a car                             | h. Box of cereal                      |
| d. Length of the hall                        | i. Distance from Vancouver to Halifax |
| e. Vitamin C tablet                          | j. Height of a child                  |

k. Can of soup

n. Length of a machine bolt

l. Window wash for the car

o. Cheese

m. Dose of heart medicine

### Answers to Exercise 13

- a. Coffee in a cup – millilitres (mL)
- b. Bag of potatoes – kilogram (kg)
- c. Gas for a car – litre (L)
- d. Length of the hall – metre (m)
- e. Vitamin C tablet – milligram (mg)
- f. Thickness of glass – millimetre (mm)
- g. Width of a page – centimetre (cm)
- h. Box of cereal – gram (g)

- i. Distance from Vancouver to Halifax – kilometre (km)
- j. Height of a child – metre (m)
- k. Can of soup – millilitre (mL)
- l. Window wash for the car – litre (L)
- m. Dose of heart medicine – milligram (mg)
- n. Length of a machine bolt – millimetre (mm)
- o. Cheese – kilogram (kg)

## Area of Rectangles and Squares

**Area** is the amount of surface within a figure. Area is described using *square units*.

For example,

- If the figure is a room, the **area** is the floor surface.
- If the figure is a tabletop, the area is the top surface of the table. If the figure is a roof, the area would be the shingled surface.
- If the figure is property, the area is the ground within the property lines.
- If the figure is this page, the area is the entire flat page that you are reading.

### Example A

Find the area of this rectangle.

The measurements of this rectangle are given in centimetres. To measure the area, we will use squares which are 1 cm by 1 cm ( **a square centimetre** ). How many square centimetres will fit on the surface of this rectangle? Count the 1 cm squares drawn within the Example A rectangle.

The area of this rectangle is \_\_\_\_\_ square centimetres.

This is written as \_\_\_\_\_  $\text{cm}^2$

**Square centimetres** is usually written  $\text{cm}^2$  which is said as “square centimetres” or “centimetres squared”. The small number is called an *exponent* and if the exponent is 2, it means multiplied by itself, so  $\text{cm}^2$  means  $\text{cm} \times \text{cm}$ .

Square kilometres are written  $\text{km}^2$ . Square metres are written  $\text{m}^2$ .

## Example B

This is a diagram of a large cattle ranch. The measurements of the ranch are shown as kilometres. What is the area of this ranch?

The square units to measure will be **square kilometres**. The area of this ranch will be the number of units 1 km by 1 km ( $\text{km}^2$ ). The diagram shows how many square kilometres would fit in an area 16 km by 10 km. Count them. The area of the Lone Bar Ranch is \_\_\_\_  $\text{km}^2$ .

Did you find a quick method for counting the square units? Did you multiply the number of rows by the number of square kilometres in each row? The quick method of finding the area of a rectangle is to multiply the length by the width.

Use this formula **to find the area of a rectangle**:

$$\text{Area of a rectangle} = \text{length } (l) \times \text{width } (w)$$

*Length times width* can also be expressed as  $lw$ ,

$$\text{so } A_{\text{rectangle}} = lw$$

The answer **must** be expressed in square units.

## Example C

Give the area of a soccer field that is 100 m by 45 m.

$$A_{\text{rectangle}} = lw$$

$$\text{Area of the soccer field} = 100 \text{ m} \times 45 \text{ m} = 4500 \text{ m}^2$$

## Exercise 14

Find the area of the rectangles described below. The measures of the length ( $l$ ) and the width ( $w$ ) have been given. Draw and label a picture for each. Be sure to write the unit of measure for each answer.

a.  $l = 10 \text{ cm}, w = 6 \text{ cm}$

e.  $l = 196 \text{ cm}, w = 28 \text{ cm}$

b.  $l = 100 \text{ km}, w = 70 \text{ km}$

f.  $l = 82 \text{ km}, w = 12 \text{ km}$

c.  $l = 400 \text{ km}, w = 100 \text{ km}$

g.  $l = 60 \text{ cm}, w = 250 \text{ cm}$

d.  $l = 975 \text{ cm}, w = 35 \text{ cm}$

h.  $l = 90 \text{ cm}, w = 2 \text{ cm}$

**Answers to Exercise 14**

a.  $60 \text{ cm}^2$

d.  $34125 \text{ cm}^2$

g.  $1500 \text{ cm}^2$

b.  $7000 \text{ km}^2$

e.  $5488 \text{ cm}^2$

h.  $180 \text{ cm}^2$

c.  $40000 \text{ km}^2$

f.  $984 \text{ km}^2$

Squares are rectangles with all four sides congruent (the same length). So to find the area of a square you still use the same formula of multiplying the length times the width. But since the length and the width of a square are the same, you are multiplying the measure of the side ( $s$ ) by itself. The formula for finding the area of a square is often written using an exponent.

$$A_{\text{square}} = s^2$$

For example, to find the area of a square piece of property, multiply the length of one side by itself. If the measure of one side of a property is 75 m,

$$\text{Area of this piece of property: } 75^2 = 75 \text{ m} \times 75 \text{ m} = 5625 \text{ m}^2$$

### Exercise 15

Find the area of the squares. The measure of the side has been given. Draw and label a picture for each. Be sure to write the unit of measure for each answer.

a.  $A_{\text{square}}$ , if  $s = 5 \text{ cm}$

d.  $A_{\text{square}}$ , if  $s = 100 \text{ m}$

b.  $A_{\text{square}}$ , if  $s = 125 \text{ km}$

e.  $A_{\text{square}}$ , if  $s = 14 \text{ km}$

c.  $A_{\text{square}}$ , if  $s = 4 \text{ mm}$

f.  $A_{\text{square}}$ , if  $s = 25 \text{ cm}$

- c. A rectangular board is 58 cm wide and 64 cm long. How much area will this board cover?
- d. Kyoko bought some curtain material that is 198 cm long and 40 cm wide. How many square centimetres of material did she buy?
- e. The distance between bases of a baseball diamond (a square) is 27 m. What is the area of the baseball diamond?

- f. The janitor waxed the floor that was 24 m long and 18 m wide. How many square metres of floor did he wax?

**Answers to Exercise 16**

a.  $680 \text{ m}^2$

b.  $2500 \text{ m}^2$

c.  $3712 \text{ cm}^2$

d.  $7920 \text{ cm}^2$

e.  $729 \text{ m}^2$

f.  $432 \text{ m}^2$

## Perimeter and Area of Rectangles and Squares

### Rectangles

**Perimeter** means **distance around**. To find the **perimeter** of a rectangle, use the formula

$$P = 2 \times \text{length} + 2 \times \text{width}.$$

#### Example D

$$\begin{aligned} P &= 2 \times \text{length} + 2 \times \text{width} \\ &= 2 \times 4 \text{ cm} + 2 \times 2 \text{ cm} \\ &= 8 \text{ cm} + 4 \text{ cm} \\ &= 12 \text{ cm} \end{aligned}$$

**Remember:** Multiply first and then add.

**Area** means **the amount of surface within a shape**. To find the **area** of a rectangle, use the formula

$$A = \text{length} \times \text{width}$$

## Example E

$$\begin{aligned} A &= \text{length} \times \text{width} \\ &= 4 \text{ cm} \times 2 \text{ cm} \\ &= 8 \text{ cm}^2 \end{aligned}$$

## Exercise 17

For each rectangle, find both the perimeter (distance around) and the area (amount of surface within). Check your work using the answer key at the end of the exercise.

a.

b.

c.

d.

e.

f.

g. Raoul's lot is shaped like a rectangle. If it is 55 m long and 15 m wide, what is the perimeter and area of his lot?

h. The playground is shaped like a rectangle. Its length is 140 m and its width is 60 m. What is the perimeter and area of the playground?

### Answers to Exercise 17

a.  $P = 40 \text{ m}, A = 96 \text{ m}^2$

b.  $P = 38 \text{ cm}, A = 84 \text{ cm}^2$

c.  $P = 52 \text{ km}, A = 153 \text{ km}^2$

d.  $P = 40 \text{ mm}, A = 96 \text{ mm}^2$

e.  $P = 94 \text{ m}, A = 480 \text{ m}^2$

f.  $P = 166 \text{ m}, A = 1\,170 \text{ m}^2$

g.  $P = 140 \text{ m}, A = 825 \text{ m}^2$

h.  $P = 400 \text{ m}, A = 8\,400 \text{ m}^2$

## Squares

**Perimeter** means **distance around**. To find the **perimeter** of a square, use the formula

$$P = 4 \times \text{side} \text{ or } P_{\text{square}} = 4s$$

### Example F

9 cm

$$\begin{aligned} P &= 4 \times \text{side} \\ &= 4 \times 9 \text{ cm} \\ &= 36 \text{ cm} \end{aligned}$$

**Area** means **the amount of surface within a shape**. To find the **area** of a square, use the formula

$$A = \text{side}^2 \text{ or } A_{\text{square}} = s^2$$

## Example G

4 cm

$$\begin{aligned} A &= \text{side}^2 \\ &= (4 \text{ cm})^2 \\ &= 16 \text{ cm}^2 \end{aligned}$$

## Exercise 18

For each square, find both the perimeter (distance around) and the area (amount of surface within). Check your work using the answer key at the end of the exercise.

a.

5 m

b.

9 cm

c.

15 cm

d.

38 cm

e.

42 cm

f.

57 mm

g. Luisa bought a 115 cm square tablecloth. What is the perimeter and area of the tablecloth?

h. Liang bought a square tarp whose side was 31 m. What is the perimeter and area of the tarp?

### Answers to Exercise 18

a.  $P = 20 \text{ m}$ ,  $A = 25 \text{ m}^2$

b.  $P = 36 \text{ cm}$ ,  $A = 81 \text{ cm}^2$

c.  $P = 60 \text{ cm}$ ,  $A = 225 \text{ cm}^2$

d.  $P = 152 \text{ cm}$ ,  $A = 1\,444 \text{ cm}^2$

e.  $P = 168 \text{ cm}$ ,  $A = 1\,764 \text{ cm}^2$

f.  $P = 288 \text{ mm}$ ,  $A = 3\,249 \text{ mm}^2$

g.  $P = 460 \text{ cm}$ ,  $A = 13\,225 \text{ cm}^2$

h.  $P = 124 \text{ m}$ ,  $A = 961 \text{ m}^2$

## Topic C: Self Test

**Mark /38 Aim 30/38**

A. For each item, circle the unit of measure you would use. (8 marks)

	Item	Unit of Measure
a)	Height of a doorknob above the floor	m, cm, mm, km
b)	Thickness of a piece of wire	m, cm, mm, km
c)	Length of a ski	m, cm, mm, km
d)	Thickness of a piece of string	m, cm, mm, km
e)	Height of a fence	m, cm, mm, km
f)	Length of a finger	m, cm, mm, km
g)	Length of a football field	m, cm, mm, km
h)	How far you travelled on your holiday	m, cm, mm, km

B. Circle the letter of the most reasonable measure. (6 marks)

a. Storage box

- i. 66 mL
- ii. 66 L
- iii. 6 L

b. Baby Shampoo

- i. 593 mL
- ii. 593 L
- iii. 59 L

c. Antifreeze

- i. 40 L
- ii. 4 L

- ii. 35 mL
- iii. 354 mL

f. Liquid laundry soap

- i. 975 mL
- ii. 97 L
- iii. 975 L

C. Circle the unit of measure you would use. (6 marks)

	Item	Unit of Measure
a)	Can of peanuts	mg, g, kg
b)	Cat litter	mg, g, kg
c)	An antacid tablet	mg, g, kg
d)	Bag of potato chips	mg, g, kg

D. Fill in the chart with the right metric prefix. (6 marks)

Small	Base	Large

e. A fish

- i. 5g
- ii. 5 mg
- iii. 5 kg

f. A bar of soap

- i. 90 mg
- ii. 90 kg
- iii. 90 g

E. Find the perimeter and area for each shape. (12 marks)

a.

b.

c.

d.

e. A double size bed cover measures 135 cm wide and 190 cm. What is the perimeter and area of the bed cover?

f. An Olympic size swimming is 50 m long and 25 m wide. What is the perimeter and area of the swimming pool?

c. Nadal wants to fence his garden. It is 15 m wide and 26 m long. How much fencing does Nadal need? How much space does Nadal have to plant a garden?

d. Yolanda would like to buy fencing and sod for her new lawn that is 54 m long and 42 m wide. How much fencing does she need? How much sod does she need?

### Answers to Unit 3 Review

A. Circle the number of coins or bills you would need.

- a. 1 toonie
- b. 1 loonie
- c. 1 toonie, 1 \$5 bill
- d. 1 toonie, 1 \$5 bill

B. State the number and kind of coins and bills you would need.

- A. 1 toonie
- B. 2 toonies
- C. 1 \$5 bill
- D. 1 \$20 bill

C. State the number and kind of coins and bills you would need.

a. **\$37 to \$50**

H. Complete this chart.

	Multiplication	Division	Division	“Say”
a)	$3 \times 8 = 24$ $8 \times 3 = 24$	$24 \div 8 = 3$ $24 \div 3 = 8$	$\begin{array}{r} 3 \\ 8 \overline{)24} \\ \underline{24} \\ 0 \end{array}$ $\begin{array}{r} 8 \\ 3 \overline{)24} \\ \underline{24} \\ 0 \end{array}$	“24 divided by 8 is 3” “24 divided by 3 is 8”
b)	$7 \times 5 = 35$			
c)	$9 \times 3 = 27$			

I. Give the answer.

a.  $28 \div 4 =$

c.  $64 \div 8 =$

e.  $5 \overline{)40}$

b.  $18 \div 6 =$

d.  $9 \overline{)81}$

f.  $3 \overline{)32}$

J. Find the quotients.

a.  $8\overline{)60}$

c.  $9\overline{)43}$

b.  $5\overline{)49}$

d.  $3\overline{)19}$

## 2-B

K. Using the following list of numbers, answer questions a, b, c and d.

96

345

3 816

6 815

38 433

95 373

a. Which numbers are divisible by 2?

b. Which numbers are divisible by 3?

c. Which numbers are divisible by 5?

d. Which numbers are divisible by 9?

2-C

L. Find the quotients.

a.  $3\overline{)963}$

c.  $4\overline{)844}$

b.  $2\overline{)682}$

d.  $5\overline{)550}$

M. Find the quotients.

a.  $9\overline{)387}$

c.  $5\overline{)915}$

b.  $6\overline{)492}$

d.  $7\overline{)469}$

N. Find the quotients.

a.  $8\overline{)832}$

c.  $3\overline{)927}$

b.  $4\overline{)836}$

d.  $2\overline{)416}$

O. Find the quotients.

a.  $5\overline{)92}$

c.  $4\overline{)73}$

b.  $7\overline{)86}$

d.  $6\overline{)91}$

P. Find the quotients.

a.  $3\overline{)851}$

c.  $2\overline{)407}$

b.  $8\overline{)509}$

d.  $7\overline{)954}$

2-D

Q. Find the quotients.

a.  $24\overline{)480}$

c.  $36\overline{)1944}$

b.  $58\overline{)928}$

d.  $73\overline{)37668}$

R. Find the quotients.

a.  $10\overline{)683}$

c.  $100\overline{)13041}$

b.  $1000\overline{)41839}$

d.  $1000\overline{)63125}$

S. Find the quotients.

a.  $348\overline{)8010}$

c.  $753\overline{)619345}$

b.  $483\overline{)27150}$

d.  $73\overline{)37668}$

2-E

T. Give an estimated quotient. Show your rounding where needed.

a.  $30 \overline{)63000}$

d.  $438 \overline{)23689}$

b.  $7000 \overline{)8400000}$

e.  $768 \overline{)63875}$

c.  $58 \overline{)2894}$

f.  $896 \overline{)80986}$

2-E

U. Word problems.

- a. A satellite orbits the moon every 58 minutes. How many complete orbits does it make 6 728 minutes?

b. If it takes 73 hours to make a snow blower. How many snow blowers can be made in 47 815 hours?

c. There were 10 780 tickets sold at the game. There were 150 tickets in each roll. How many complete rolls of tickets were used? How many were sold from the next roll?

V. Solve the cost per unit price.

a. 6 packages of rice for \$12

b. 2 tubs of yogurt for \$8

W. Solve the unit price and then underline the best buy.

a. Dog food

8 kilograms for \$16 or 15 kilograms for \$45

b. Movies

9 movies for \$162 or 3 movies for \$48

**3-B**

X. Circle the number of coins or bills you would need to get from the first number to the second number. Make sure to use the least number of coins or bills.

a. \$58 to \$60

b. \$41 to \$50

c. \$78 to \$90

Y. State the number and kind of coins and bills you would need to get from the first number to the second number. Make sure you use the least number of coins and bills as possible.

a. \$38 to \$40

b. \$21 to \$40

c. \$76 to \$100

Z. State the number and kind of coins and bills you would need to get change from the second number. Make sure you use the least number of coins and bills as possible.

a.

**\$43 to \$100**

Need	To get to

c.

**\$58.37 to \$100**

Need	To get to

b.

**\$23 to \$80**

Need	To get to

d.

**\$62.71 to \$100**

Need	To get to

AA. State the number and kind of coins and bills you would need to get change from \$100. Make sure you use the least number of coins and bills as possible.

a.

Bread maker for \$61.59

b.

Shop vacuum cleaner for \$84.43

c. Mrs. Chui bought building blocks for \$33.44. How much change will she get from \$100?

CONGRATULATIONS!!

Now you have finished Book 3 Final Review.

TEST TIME!

Ask your instructor for the practice test.

Once you've done the practice test, you need to do the Book 3 Final Review test. Again, ask your instructor for this.

Good luck!
