

Atrial Fib - Long Term Management

Step 1: Rate or Rhythm

Initial Choice (patient decision)

Rate Control
(HR > 100 or poor Sx control)

Start long term rate control

Rhythm Control

Preferred if
- recent AF diagnosis (< 1yr)
- impaired aql. b/c Sx
- multiple recurrence
- difficult achieving rate control
- cardiomyopathy

Start Long Term Rhythm Control

Assessing Control (on rx's)

What is patients HR? ————— > 100 BPM

< 100 BPM

IS \emptyset SE, continue
& assess stroke prevention

Optimize rate control rx's
(\uparrow to target dose)

On target dose & HR
still > 100 BPM

LVEF \leq 40%

Add digoxin
(be cautious in CKD pts &
pts on furosemide or thiazide
diuretics b/c of hypokalemia.)

LVEF > 40%

Add Beta
Blocker

Add Verapamil
or diltiazem

Add
Digoxin

Step 2: Stroke Prevention

↳ use relevant scoring tools to weigh risks & benefits to starting stroke prevention therapy
