

Hypertension

Target BP

High risk CVD: SBP < 120

Who? CVD, CKD, age 75+ or CV risk 15%+

Diabetes: < 130/80

Others: < 140/90

Resistant HTN

↳ if on 3+ antihypertensives (1 must be diuretic)

Typical: ACEI + DHP CCB + thiazide

Treatment

- + spironolactone (DOC)
- + bisoprolol
- + doxazosin
- + amilioride
- + clonidine

Treatment - Initial

★ lower doses of multiple drugs better than high doses of few

Rx	Best in Who?	Avoid in Who?	Notes
Diuretics	<ul style="list-style-type: none"> · elderly · black · isolated systolic HTN 	<ul style="list-style-type: none"> · arrhythmias hx · sulfa allergy · gout · hyponatremia 	<ul style="list-style-type: none"> · long acting preferred · high doses for resistant HTN
Beta Blockers	<ul style="list-style-type: none"> · < 60 yrs · angina, HF, MI · tachycardia 	<ul style="list-style-type: none"> · severe asthma/COPD · HB 	
ACEI	<ul style="list-style-type: none"> · black · diabetes, MI, HF, CKD, heart disease 	<ul style="list-style-type: none"> · hx angioedema · artery stenosis 	
ARB	<ul style="list-style-type: none"> · if tolerate ACEI 	<ul style="list-style-type: none"> · hx angioedema · artery stenosis 	
CCB	<ul style="list-style-type: none"> · elderly · black · isolated systolic BP 		<ul style="list-style-type: none"> · reserve nifedipine for HTN in pregnancy

Special Populations

Pregnancy

↳ recommendation ASA to prevent pre-eclampsia

Safe

- labetolol
- nifedipine XL
- methyldopa
- beta blockers

Avoid

- atenolol
- spironolactone
- ACEI/ARBs

Breastfeeding

Safe

- labetolol
- nifedipine XL
- methyldopa
- may use ACEI
 - captopril, enalapril, benzopril, quinapril preferred
